

Out of Practice Medication

From DLM 487 Vision release Out of Practice medications are viewable on your therapy screens by default. A new filter option is available which enables you to either:

-  Show therapy issued outside the practice, active by default
-  Hide therapy issued outside the practice

A new icon  is now displayed against therapy issued outside the practice on all Consultation Manager tabs and **Outside Practice** is displayed in the **Last Issued** column. This includes therapy imported via GP2GP.

Last Issued	Drug	Is
<input type="checkbox"/> Outside Practice	Warfarin 1mg tablets	
<input type="checkbox"/> Not Issued	Tamoxifen 20mg tablets	
<input type="checkbox"/> 19/02/2015	Co-codamol 30mg/500mg capsules	4

Therapy Tab in Consultation Manager

If you do not want to view this medication in the **Repeats** screen then you can suppress the display of Out of Practice Medication by:

1. Open **Consultation Manager** on the specific staff members vision login.
2. Select **Consultation - Options** from menu toolbar.
3. Click **Set up**.
4. Choose the **Therapy** tab and from the **Repeats** section choose Active In Practice from the drop down list under the **Initial Repeat View** option.

5. Click OK.
